Docket No: 10111652 CHUANG et al.

## **DETAILED ACTION**

## Claim Rejections - 35 U.S.C. § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Note: This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a)

2. Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Kim et al

Kim et al (US 6,524,915) discloses a method for forming a floating gate:

- sequentially forming a gate dielectric layer 101 of SiO and a first conducting layer 102 of poly-Si on a semiconductor substrate 100 [Fig. 2A and col. 1]
- forming a patterned hard mask 104 of SiN having an opening exposing the conductive layer
- forming an insulating layer 105 of SiO on the surface of the hard mask and filling the opening
- etching the insulating layer to form a first spacer 106 on a sidewall of the opening [Fig. 2C]
- removing the hard mask layer [Fig. 2E and col. 2]
- forming a conducting spacer 116 of poly-Si on the sidewall of the first spacer [Fig. 2F]
- removing the exposing conducting layer 114 and the exposing gate dielectric layer 113 [Fig. 2G]

## Allowable Subject Matter

4. Claims 9-16 are allowed because *Kim et al* does not teach a floating gate consisting of a first conductive layer and a second spacer.

Any inquiry concerning this communication from the Examiner should be directed to *Calvin Lee* at (571) 272-1896 from 7:00 to 5:00 (Monday-Thursday). If attempts to reach the examiner by telephone are unsuccessful, Art Unit 2825's Supervisory Patent Examiner *Matthew Smith* can be reached at (571) 272-1907.

Any inquiry relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0596. The fax phones are (703) 872-9318 for regular communications and (703) 872-9319 for After-Final communications.
